Salmon Pink Bird-Eating Tarantula **Fun Facts!** *Lasiodora parahybana*

They have a very painful bite but their venom is not strong enough to cause any medical damage!

When threatened, they have the ability to eject small, painful hairs that can cause lots of irritation!

The same painful hairs are also placed around the nest to ward off any curious predators!

Female tarantulas have a very large brood, usually between 1200 and 3000 eggs!
